

SQL Online Compiler

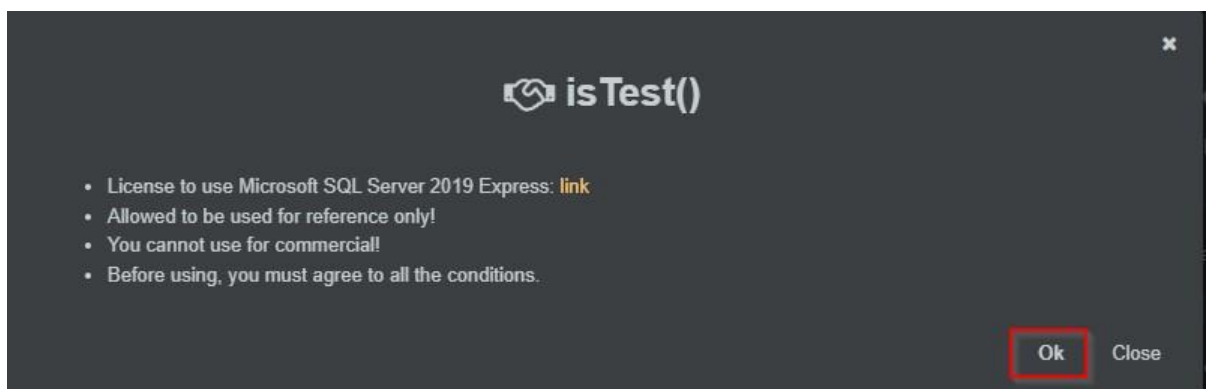

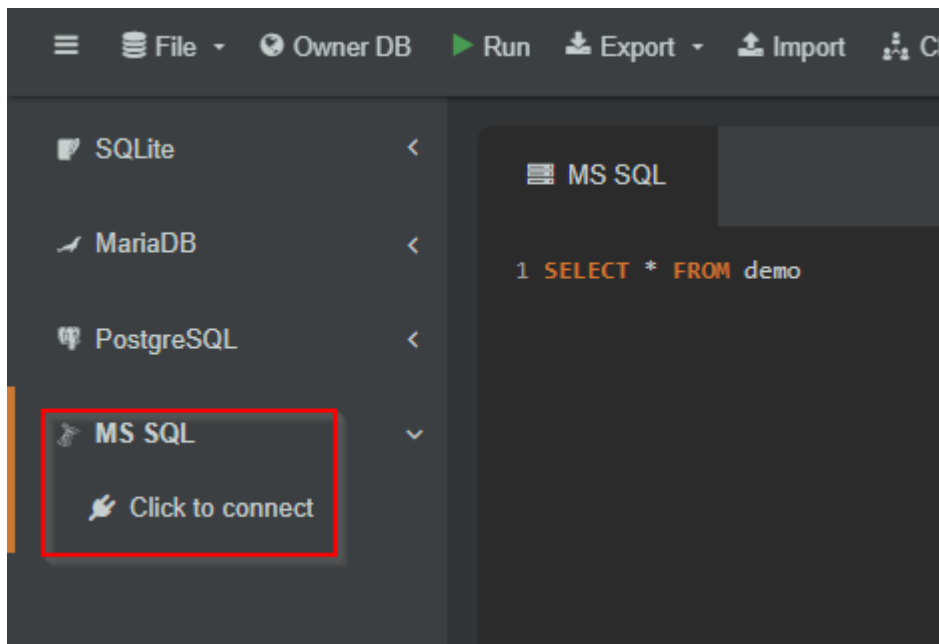

1. Go to <https://sqliteonline.com/>
2. Sign in

3. Give email id and password then click on create account

4. Click to connect

5. To save SQL File

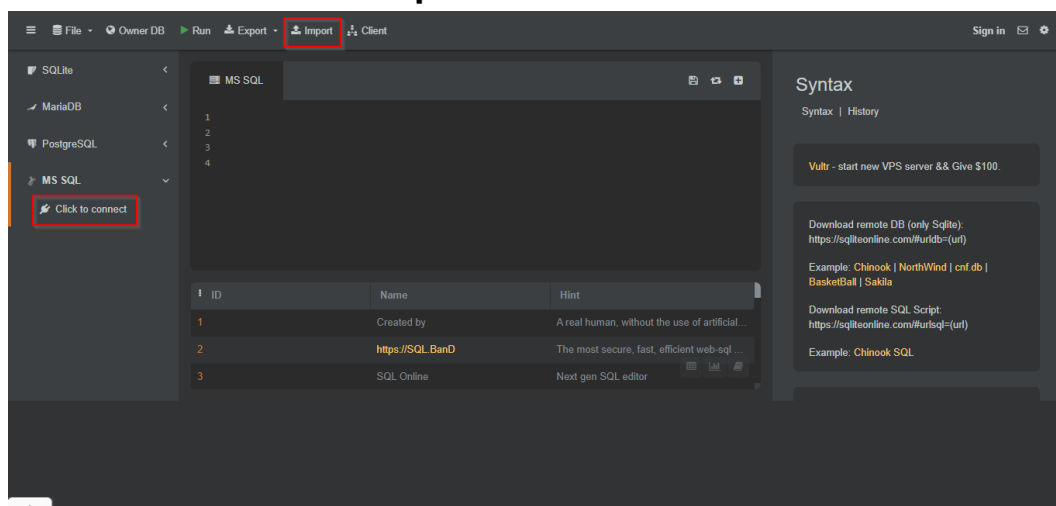

6. To open SQL file in online compiler

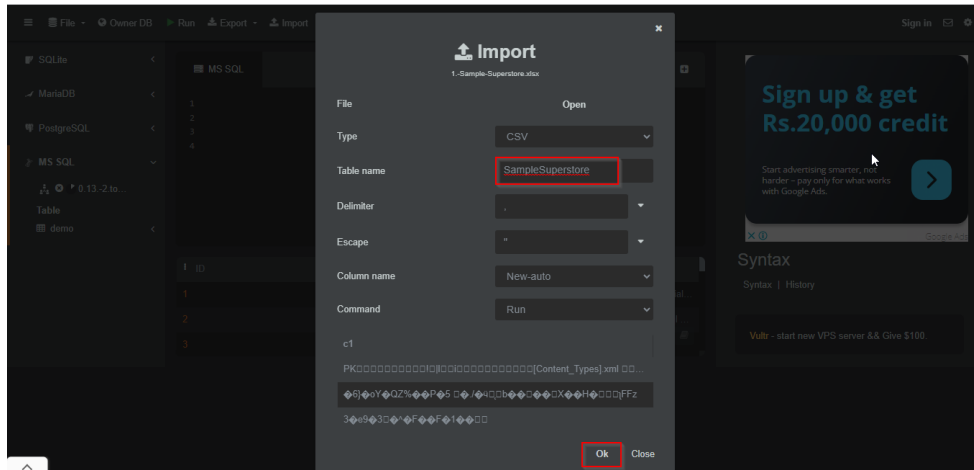

Note - We cannot create a database in the online compiler, but we can create as many tables as we want. As the compiler has a by default database all the tables will get saved in this database.

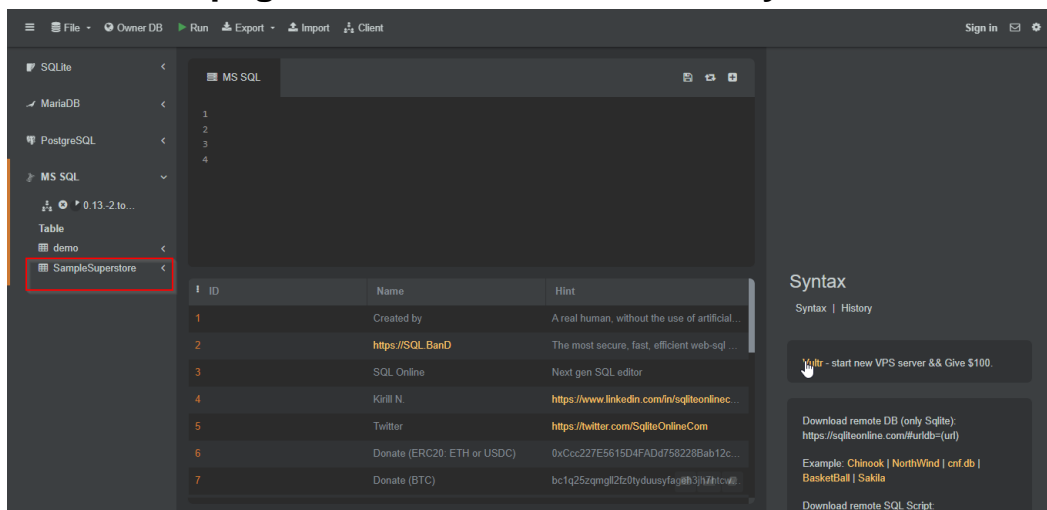

7. To import CSV File in Compiler, first connect with MS SQL and then click on import

Then select the file and click on Ok

After importing the file, it may give some warning, at that time refresh the page and direct to the MS SQL you will see the table.

While seeing the table as an output the columns will be small, and not able to see any values, at that time select the column cell and drag the line to required size to see the values in the table.

If the output is like that

Then increase the size of the cell by dragging it.

The screenshot shows the DBeaver IDE interface. On the left, a sidebar contains a tree view with the following items: **SQLite**, **MariaDB**, **PostgreSQL**, **MS SQL** (selected), **0.13-2 to...**, **Table**, **demo**, **SampleSuperstore**, and **SampleSuperstore1**. The main editor area displays a SQL query: `SELECT * FROM SampleSuperstore1`. Below the query, a table of results is shown. The table has columns: **Order ID**, **Product ID**, **Product Name**, **Quantity**, **Unit Price**, **Discount**, **Customer Name**, **Customer Address**, **Customer City**, **Customer State**, **Customer Zip**, **Customer Country**, **Customer Phone**, **Customer Email**, **Customer Fax**, **Customer Title**, **Customer Title2**, **Customer Title3**, **Customer Title4**, **Customer Title5**, **Customer Title6**, **Customer Title7**, **Customer Title8**, **Customer Title9**, **Customer Title10**, **Customer Title11**, **Customer Title12**, **Customer Title13**, **Customer Title14**, **Customer Title15**, **Customer Title16**, **Customer Title17**, **Customer Title18**, **Customer Title19**, **Customer Title20**. The first few rows of data are visible, showing order details for various products and customers.
